## GW3D Add-On to Groundwater Vistas

GW3D is distributed as a CD-ROM. The manual is electronic and is installed along with the software. Using GW3D is fairly straightforward and is facilitated by working through the brief tutorial in the electronic manual.

GW3D is designed to be used with Groundwater Vistas. GW3D is authorized using a **security code** or via the Groundwater Vistas 5 Enterprise edition hardware lock. If you do not have the Enterprise version, then install GW3D and run it for the first time. On the **Help** menu, select **About GW3D**. Click the **register button** and email the system code to [support@groundwatermodels.com](mailto:support@groundwatermodels.com). We will return a security code that unlocks the software. If you use Groundwater Vistas on more than one computer, you will need a separate code for each computer.
